" If Security is important to you, your team and your property - you definitely want to call 3D Security and Emergency Solutions "

At 3D Security, we are proud to be your subject experts in the fields of private security, Risk Management, and Emergency Procedures/Solutions.

The services we offer include:

PROFESSIONAL CONCIERGE AND SECURITY TEAM:

our mission statement is to enhance the perception of security services by providing motivated, well-trained staff to each location. We do this by offering training to our staff members every week, with a new educational session each month. This ensures that both our Enhanced Security Team, and our Professional Concierges Team, is motivated and ready to exceed our clients' expectations. Our Enhanced Security Team received De-escalation training, advanced first aid (Medical first Responder), and Use of Force / Defensive Tactics. Our professional concierges receive training like Verbal Judo/Customer Services, First Aid, and Professional Report Writing.
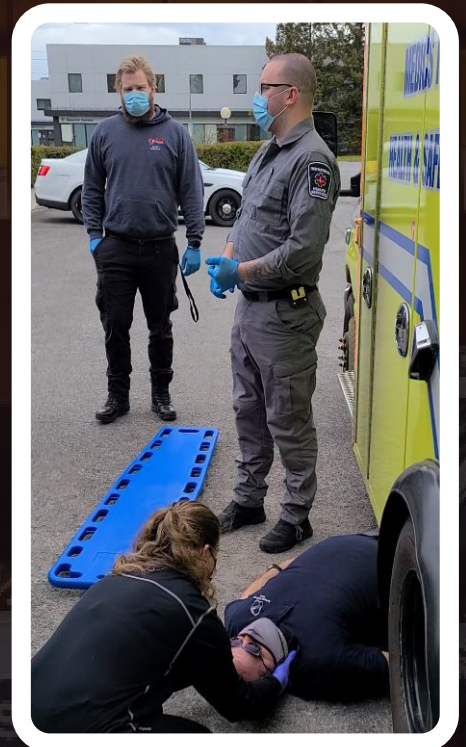

TRAINING:

Along with training our valuable team members, we also have experience in training staff from our valued clients. Some of the training that we have offered to condominium staff and office workers include Verbal Judo, Situational Awareness (recognizing violence before it happens/active assailant), and WSIB-certified First Aid and CPR.

3D SECURITY SERVICES

DELAY • DETECT • DETER

EMERGENCY MANAGEMENT:

Don't wait for a crisis to develop your emergency plan. Let 3D Security and Emergency Management conduct either a Security Audit or Hazard Identification & Risk Assessment of your business. Once they have been identified, we will draft emergency plans, as well as drills and exercises, to ensure that your team members are fully cognizant of their duties during an emergency. Our drills and exercises come with After-Action and Corrective-Action reports which identify any gaps in the plan so that they can be addressed before any crisis.

At 3D Security and Emergency Services, we do not try to make generic software fit our client's needs – we take the time to understand the needs and then custom develop software solutions to address the client's individual requirements. When it comes to security and emergency solutions, one size does not fit all!

Examples of our custom-developed software include: SecuredCondos and our upcoming 3D Rapid Response application.
